

NAGRAJ NAIK

Mainframe & Cloud Engineer

(+91) 9591835080 | naiknagrj@gmail.com | Bengaluru, Karnataka, India | linkedin.com/in/nagraj-naik-314710154

PROFESSIONAL SUMMARY

Mainframe engineer with 4+ years at Infosys working on IBM z/OS workload rehosting, COBOL/CICS/JCL development, and production support on Micro Focus Enterprise Server. Comfortable across the full stack - from abend analysis and batch scheduling through to AWS infrastructure and Python automation. Has converted legacy COBOL file-processing routines into cloud-ready Python scripts and holds dual AWS certifications alongside an Infosys Generative AI Professional credential.

TECHNICAL SKILLS

Mainframe: COBOL, CICS, JCL, DB2, VSAM, Micro Focus Enterprise Server, Control-M, Batch Processing, TSO/ISPF, Abend Analysis.

Languages: COBOL, Python, SQL, JCL, PowerShell, REXX (basic)

Cloud (AWS): EC2, S3, CloudWatch, RDS, Lambda, IAM, SQS, SNS, FSx, CloudTrail

Tools: Git, GitHub, SSMS, Jira, Confluence, ServiceNow

Compliance: SOC2, Disaster Recovery (DR) planning and execution

PROFESSIONAL EXPERIENCE

TECHNOLOGY ANALYST | Infosys | Mangalore, Karnataka | Dec 2021 - Present

COBOL/CICS/JCL development, batch operations, and L2 production support of IBM z/OS workloads rehosted on Micro Focus Enterprise Server; additionally managing the AWS cloud infrastructure underpinning the modernized mainframe platform.

Mainframe Development & Enhancement

- Worked across the full COBOL development cycle on IBM z/OS workloads rehosted to Micro Focus ES - picked up requirements, wrote new programs, fixed defects, and tuned existing code for both batch and CICS online transaction flows.
- JCL was central to the day-to-day: created and modified job streams, utility steps, VSAM dataset definitions, and GDG configurations, most of them tied into Control-M scheduling.
- Built and maintained CICS transaction programs reading from and writing to DB2 tables and VSAM files within the Micro Focus CICS/ES environment.
- Moved a sizeable chunk of file-processing logic from sequential COBOL reads into DB2 SQL queries - batch runtimes dropped 25-30% on the affected jobs.
- Debugging involved Micro Focus Animator, fault analysis utilities, and a lot of dump reading - variable tracing, VSAM record inspection, and logic reconstruction.
- Converted legacy COBOL file-processing programs in Python to push batch output files directly to AWS S3, cutting out the manual FTP step that was causing delays and occasional data integrity issues.

Batch Operations & Production Support

- Day-to-day involved watching over 10,000+ batch executions on Micro Focus ES - catching abends early, restarting failed steps, untangling dependency chains, and keeping the schedule on track across environments.
- L2 incident SLA held at 98% across COBOL, JCL, DB2, and CICS-integrated processes throughout the engagement.
- Most recurring failures came down to the same root causes: JCL step sequencing errors, VSAM space and catalog issues, COBOL logic defects, and Control-M dependency drift - fixed permanently once identified, rather than just restarted.
- Took part in RCA calls and post-incident write-ups with teams across time zones; built a library of runbooks and SOPs that cut onboarding time for new support analysts.
- Ran DR exercises, quarterly patching cycles, access reviews, and environment health checks within SOC2 compliance requirements.

Cloud & Platform Engineering

- Kept AWS EC2 environments at 99.95% uptime through scheduled maintenance windows and catching platform issues before they became incidents.
- Wrote Python scripts to automate mainframe batch file transfers to S3 - what had been a manual FTP process now runs unattended, improving delivery speed and reliability by 40%.
- Built Python-based cloud integration layer converting legacy COBOL file-processing routines into S3-ready pipelines, removing the need for human handoffs between batch completion and downstream systems.

- RDS/MS-SQL admin work included data corrections, schema updates tied to COBOL program changes, and data loads supporting rehosted workload testing.
- Wired up CloudWatch and Lambda to alert on batch failures and platform anomalies via SNS - gave the team visibility before the monitoring batch caught up.

EDUCATION

Bachelor of Technology - Electronics & Telecommunication | CGPA: 7.5

Vishwakarma Institute of Information Technology, Pune

CERTIFICATIONS

- AWS Certified Cloud Practitioner
- AWS Certified Solutions Architect - Associate
- Infosys Certified Digital Engineering Cloud Professional
- Infosys Certified Generative AI Professional
- GitHub Copilot Certified - GH-300 (GitHub / Microsoft)

ACHIEVEMENTS

- CRLADM Unit RISE Award - Most Valuable Player (Individual), H2-FY2026 (Oct 2025 - Mar 2026). Unit-level recognition for sustained contributions to mainframe production stability and batch operations.
- Insta Award (Certificate of Appreciation) - Jan 2026. Recognised for automating the Store Files Copy Process through Control-M, reducing manual intervention and eliminating monitoring errors on a critical batch workflow.
- Quarterly RISE Award - Most Valuable Player (Individual), H2-FY2025. Consistent high-performance recognition across the CRLADM mainframe support engagement.
- Insta Award (Certificate of Appreciation) - Mar 2025. Acknowledged by EVP & Group Head - HR, Infosys, for independently owning infra/platform activities alongside BAU delivery on a global retail client mainframe engagement.
- Insta Award (Certificate of Appreciation) - Dec 2023. Recognised by EVP & Group Head - HR, Infosys, for rapid skill ramp-up and becoming a key contributor to a global retail client mainframe engagement within a short span.
- Insta Award (Certificate of Appreciation) - Mar 2023. Early recognition from EVP - Service Offering Head, Retail CPG & Logistics, for contributions to a global retail client BAU support engagement.
